-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-14 are rejected under 35 U.S.C. 102(e) as being anticipated by Hefner (US Patent Application Publication 2003/0091684).

Hefner discloses in Figure 1, a device for opening and closing injection nozzles in an injection molding tool, the nozzle (8) comprising a nozzle member (15) with an opening (16) which is opened and closed with a needle (40), the needle being fixed to an axially-movable piston plate (51) located in a receptacle (52), first and second work chambers (not numbered, but located above and below the plate 51) formed on either side of the plate and acted upon by fluid (55,56) to actuate the needle, the needle extending outwardly through a recess (at 42) in an end element (30), wherein the second work chamber is sealed by a first sealing element (54) between the receptacle and plate and a second sealing element (43) arranged between a wall of the recess and the needle and coming in direct contact with the needle. The device further comprising a base plate (30), an end plate (57) and a cylinder plate (56) which contains the piston plate.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 15 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hefner.

While Hefner does not disclose an additional needle arranged on the piston plate, such an addition would have been obvious in light of St. Regis Paper Co. v. Bemis Co., Inc. 193 USPQ 8,11.
